

# GLOBAL IQ SCORES: VALUES PER COUNTRY

## PISA 2006 data transformed into IQ

fathersmanifesto.net/iqpisa2.htm / edited for chart readability by ISGP-studies.com '19

The PISA 2006 data (mean birth year of the subjects was 1991) on the mathematical scale are transformed into IQ in such a way that IQ 100 is the mean of the UK, the Netherlands and New Zealand (i.e. IQ 100 corresponds to a PISA score of 516). This seems to be a justified method of calibration because the mean IQ of the UK shows a downward trend, the IQ of the Netherlands seems to be nearly constant and New Zealand's trend is upward. The original mean of these three countries in the first book by Lynn and Vanhanen (2002) was IQ 100.

Read the following data in this way:

“Finland IQ 97/101 (107/105)”

This means:

- Finland mean IQ given by Lynn and Vanhanen (2002) “97”, by Rindermann (2007) “101” (from his adjusted value IQ 103 always subtracted 2, because the "Greenwich-IQ" of UK in his data is 102);
- PISA-IQ 2003 “107”, PISA IQ 2006 “105”.
